

Kevin M. Brady MD MS

1915 Petit Blossom

San Antonio Texas, 78247

March 21st 2024

The United States Department of Food and Drug Administration,

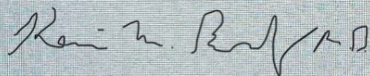

This letter is in support of the ZEM life device a novel auto injection device. This is break through technology that will save lives in both the military and civilian sectors of the United States healthcare systems.

Non medical persons cannot always recognize the need for the administration of life saving medications. This device has multiple applications to include epinephrine for anaphylaxis, opioids for severe pain in injury, and treatment of nerve agent attacks.

I am an Anesthesiologist and Critical Care physician. I served 30 years in the United States Army to include deployments in Iraq and in Afghanistan. I also had the opportunity to work in the Joint IED Defeat Organization and the Rapid Equipping Force during the global war on terror. This device has broad medical and military application.

Thank you for your time and attention to this very important medical breakthrough.

Very Respectfully,

Kevin M. Brady MD MS

Anesthesiology, Critical Care Medicine, Internal Medicine

Colonel United States Army (Ret)
